UNIFIED COMMUNICATIONS

Joining the dots of your comms strategy.

Lease lines & Wan connectivity

High speeds, even at peak times
Leased lines are dedicated to you, so there's no need to worry about your connection being shared with anyone else.

Reliable

Our dedicated leased lines use fibre-optic cable and high-grade hardware to ensure reliability.
Fast uploads
We offer a fast upload speed meaning that your staff can back up files, connect from home and more with ease.

Business-class support

Our SLAs are agreed with you on signing with us, meaning that we will have an agreed timescale to fix any problems you may encounter with our products.

SIP vs ISDN

'Session Initiation Protocol' – more commonly referred to as SIP – is one of the fastest growing technologies today. Many are businesses choosing to migrate away from traditional ISDN lines in favour of SIP trunks.

ISDN has been the telephony technology of choice for many years due to the reliability of its service. However, cost and a lack of flexibility are prompting firms to choose alternative connectivity options. This area is where SIP is emerging as a clear favourite.
The main reasons for this are that SIP trunks allow businesses to lower costs, increase resilience, improve flexibility and use multiple new and existing phone numbers anywhere in the UK. What's more, SIP will work with much of the voice and data networking equipment that the majority of businesses already have in place.

Deploying SIP trunks can represent a giant leap towards simplifying your organisation's communications and preparing for the latest real-time enhancements. However, the biggest motivation for most businesses is without a doubt the immediate and substantial cost savings.

By removing costly ISDN lines and routing call traffic over a data network instead, you no longer have to pay for ISDN line rental. This in turn can save up to 50%* on line rental expenditure. Moreover, SIP trunks enable free calls between multiple company sites. With JungleIT as a SIP trunk provider, you get a service that is more robust and cost effective than ISDN. Furthermore, because SIP trunking is an IP-based telephony service, you also get number flexibility which in itself delivers a host of added benefits that can solve real business issues.

*Compared to BT's standard ISDN30 rates

Benefits include:

- ✓ Save money on call costs and line rental
- ✓ Save up to 50% compared to BT's standard ISDN30 rates
- ✓ Free internal calls and great features
- ✓ SIP trunks enable free calls between multiple company sites
- ✓ Scale up and down when you want
- ✓ An additional number of SIP channels can be added to a site at a fraction of the cost and time that deploying ISDN would entail

Built-in Business Continuity

With a SIP trunk, incoming calls can be quickly redirected to alternative sites or numbers

Compatible with Skype for Business

JungleIT SIP trunks are compatible with Skype for Business which lets you consolidate voice, IM, audio, video, and web conferencing into a single interface and reduce your operational and administrative costs

Lines & Calls

With a Low Cost Routing (LCR) package, you can enjoy low cost communications without changing your existing BT line or telephone numbers.

- ✓ Analyse your phone bills to identify calling patterns
- ✓ Intelligently re-route your outbound calls through lower cost Tier 1 carriers

This will deliver significant call savings that drop straight to your bottom line. Furthermore, we can put you in complete control of your expenditure by providing you with a full breakdown of your call costs through our bespoke e-billing service.

JungleIT provide business calls and lines packages that are tailored to meet the specific communications requirements of your business.

JungleIT provide our own bespoke e-billing service to ensure your telephone bills are provided in the exact way you would like. We can offer you a full range of telecommunications services at highly competitive tariffs with no disruption to your business.

Simply tell us which numbers you want to switch and we will take care of the rest. There is no set-up fee and no standing charge, you are simply billed on a pence-per-minute basis once the service has been provisioned (usually within 10 working days). Moreover, JungleIT has its own billing platform so thereafter you deal direct with us, no third party involvement.
